

Supply - demand problem in the sales and purchasing units.

Par kevinmanuel

Hi,

I have a running problem with Capitalism that I have had from first game release until the pre beta i'm playing now. My sales unit(s) have a big demand bar over the supply bar, but my purchasing unit(s) are in the yellow (the demand bar is just about 75% of the supply bar). Utilization is about 60-80%

The inventory unit seems to be useless, but its utilization is usually at 100%. Anyone else seen this problem?

please help

I did not find the right solution from the internet.
